

I have been a long-time XM subscriber, and I find the traffic and weather channels invaluable during my travels, as well as the wide variety of other channels.

I believe that I am entitled to listen to weather and traffic information on whatever device I choose, and I do not want my choices limited by the National Association of Broadcasters.

I urge you to reject NAB's petition 04-160 and support new technologies such as XM radio and their ability to deliver information to me.
